

## **Fluid Conversion Kit: Converts Wall Mounted Faucets to Tub Filler**

October 2014

Many customers have asked if they can use our Wall Mounted faucets as tub fillers. The answer is yes! However, in line with fluid's commitment to sustainability, our wall mounted faucets all feature SSI Eco-Care pivoting aerators to provide a high pressure, lower flow of water that conserves water and energy while still delivering the luxurious hand washing experience demanded by home owners.

Lowering water volume for a tub filler does not make sense as the objective is to fill the tub as quickly as possible, so as not to lose more heat than necessary. So, if a home owner would like to use a fluid wall mounted faucet as a tub filler, they simply need to specify when ordering that it is to be used as a tub filler, with the suffix –S on the end.

Example:

fluid Penguin Single Lever Wall mounted Lavatory faucet is Model F20008T.

fluid Penguin Single Lever Wall Mounted Tub Filler is Model F20008T-S

The –S simply stands for 'straightener' and signifies that the faucet aerator will be substituted with a flow straightener (pictured), to increase water volume and enable faster tub filling.
