FP8001023 - Extra Long 110mm Speed Connect - CP \$12
 FP6007049 - Replacement Large Escutcheons 65 mm - CP \$36

why switch?

- Easier to clean the shower
- Easier for everyone to safely shower, even those needing to sit
- Easier to wash a child's hair and to wash pets
- Does not touch the plumbing behind the wall
- Does not damage shower walls
- Can be installed in about an hour

Switch allows you to quickly, easily and affordably add a beautiful slide rail and hand shower to the shower system you already have.

RETROFITS

Simply replace the standard shower arm of an existing shower system with the Switch retrofit slidebar to turn a basic shower into your own private spa. Switch easily adds a hand shower and can upgrade your shower head, quickly and easily without touching the plumbing behind the wall or damaging the shower wall.

NEW CONSTRUCTION

Switch also adds value to a new installation. Because there is a diverter built right in to the slide rail, you can install a tub spout, shower head and hand shower all with a non-diverting pressure balancing valve. This is a great option to get a beautiful, flexible shower system even if the budget is limited.

FLEXIBLE

You choose the type of showerhead, and hand shower that best suits your individual style. Switch allows you to choose the luxury of a relaxing rain shower head, the invigorating spray of a fixed shower head, or anything in between. It's your shower and your choice.

Every single shower should include a hand shower.
